

Glycol ether solvents are routinely used in the formulation of industrial products. The chemicals exhibit low vapor pressure and are typically high boiling and exhibit some degree of water solubility. The analysis uses the enclosed list of target standards with unknown identification for the non target compounds in the same class which may be present. Due to the matrix differences which may be encountered GC/MS is used as the determinative technique. Isolation of the glycol ethers is accomplished using proprietary Solid-Phase Extraction (SPE) based technology.

Glycol ether solvents

Ethylene glycol monomethyl ether
Ethylene glycol monoethyl ether
Ethylene glycol monopropyl ether
Ethylene glycol monoisopropyl ether
Ethylene glycol monobutyl ether
Ethylene glycol monophenyl ether
Diethylene glycol monomethyl ether
Diethylene glycol monoethyl ether
Diethylene glycol mono-n-butyl ether
Propylene glycol propyl ether
Propylene glycol butyl ether
Dipropylene glycol methyl ether
Tripropylene glycol methyl ether
Diethylene glycol monoethyl ether
Diethylene glycol
